

PhosFix for cats & dogs™

FOR PETS

**THE MOST EFFECTIVE FORMULATION
for cats/dogs to control phosphorus**

***RESTORE THE PHOSPHORUS BALANCE
without side effects***

Too much phosphorus in your cat/dog's blood can cause joint and muscle weakness and pain, red and itchy eyes, even severe diarrhea or constipation, nausea and vomiting: it can be deadly!

Phosphorus is important for healthy bones and body, for the health of kidneys, muscles, blood vessels: it is needed by every cell and to produce energy.

When their kidneys aren't working well, phosphorus levels can get too high.

The first step is to **LIMIT THE PHOSPHORUS** they consume, keep them well hydrated and in good physical activity: reducing phosphorus often involves reducing protein and this leads to loss of strength and wasting of muscles. But that's not all: manipulating their nutrition may not be enough.

The next step is to **TAKE PHOSPHORUS BINDERS**, but this can lead to side effects, as they contain artificial active ingredients: those with aluminum can cause brain damage, those with calcium problems in terms of calcification.

So what to do?

The SOLUTION comes thanks to NIACINAMIDE (vitamin B3), able to safely block (or limit) the absorption of phosphorus, supporting normal long-term renal function.

TOTALLY NATURAL, PhosFix for cats & dogs™ brings these benefits:

- Normal levels of phosphorus in the kidneys
- Normal elimination of toxins
- Normal cholesterol levels
- Less effort and more energy
- Stronger bones
- Possibility to feed them with a little more protein and help prevent muscle atrophy

PhosFix for cats & dogs™ is FURTHER OPTIMIZED with other natural ingredients:

- F.O.S. (FructoOligoSaccharides), a prebiotic that supports the growth and strength of probiotics (healthy bacteria), to normalize BUN (blood urea levels), creatinine and GFR (Glomerular Filtration Rate)
- Inulin, another prebiotic, supports more efficient toxin elimination
- Chitosan, which supports normal phosphorus levels, the elimination of toxins, fats, cholesterol
